

## Conclusion:

Sound and Say Spelling is the best way to help students to learn to read because it focuses them on analyzing the sounds within spoken and printed words.

# Step-by-step

1. **Hearing:** The brain disassembles spoken words from their speech packets and turns them back into individual phonemes.
2. **Spelling:** The brain names (or labels) each sound by matching or identifying each phoneme with a phonogram, which is a letter or a combination of letters created to represent specific sounds. Students **say the names of the sounds** and write them down.
3. **Basic Writing:** Writing is the process of printing phonemes as phonograms. It's the process of converting (or translating) speech sounds into the letters or letter-combinations that represent those sounds. As such, writing is spelling in printed form.
4. **Reading:** Reading is the process of converting phonograms back into phonemes. It's the process of translating printed letters and words back into the spoken sounds they were meant to represent.

STUDENTS WHO  
**SPELL WELL**  
CAN  
**READ WELL**
